Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                         This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14422-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human Hsp72; heat shock protein 72; chromosome 6p21.3; Hsp72 inhibitor; expression modulator; JNK phosphatase inhibitor; antiproliferative; drug screening; cancer; leukaemia; lymphoma; solid tumour; sarcoma; carcinoma; breast cancer; prostate cancer; premalignant condition.

The invention relates to a novel method of identifying compounds that inhibit proliferation of cells comprising contacting a test compound with a call which wereaxpresses Hsp72 (heat shock protein 71), and determining if the test compound inhibits activity or expression of Hsp72.

Conditions to allow the two components to interact and bind, forming a complex which is detected. The invention also relates to a method of identifying compounds that inhibit Hsp72-mediated JNK phosphatase comprising a contacting a test compound with a cell which expresses Hsp72, exposing the cell to a heat induced stress and determining if the compound inhibits JNK phosphatase activity. The invention additionally encompasses compositions comprising an inhibitor of Hsp72 or JNK phosphatase activity are useful for inhibiting the phosphatase activity are useful for inhibiting the phosphatase or Hsp72 or JNK phosphatase activity are useful for inhibiting the phosphatase or Hsp72 is used to treat a proliferative disorder such as carcinomas, breast cancer, prostate cancer). The compounds that inhibit they can also be administered to real premalignant conditions and to prevent progression to a neoplastic or malignant state. The compounds that inhibit Hsp72 function are administered to a patient compounds that inhibit Hsp72 function are administered to a patient cancer intim a disease or disorder mediated by an increase of Hsp72 expression to man Hsp72 used in the exemplifications of the invention
                               Identifying compounds that inhibit proliferation of cells and capable of modulating the expression of heat shock protein 72 gene and/or activity of Hsp72 useful for treating cancers such as leukemia, lymphoma.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

Primers and probes based on the HSP70 cDNA coding sequence can be used to detect the abnormal transcription of intracellular HSP70 mRNA in human acute and chronic sustained stress load

                                                                                                                                                                                                                                                                                                                    Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                                                                                              This sequence represents the human heat shock protein HSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps

                                                                                                 Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                       This sequence represents the human heat shock protein LHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mkNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Biol. Chem. 261:12692-12699(1986).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        human heat shock protein.";
Clin. Exp. Allergy 27:682-690(1997).
-!- ALLENGEN: Causes an allergic reaction in human.
-!- SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length 503;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Provided in cooperation with other chaperones, Hsp70s stabilize preexistent proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         STRAIN=XX3;

MEDLINE=940431116; PubMed=8226849;

Eddy R.J., Sauterer R.A., Condeelis J.S.;

T. "Aginactin, an agonist-regulated Factin capping activity is associated with an HSC70 in Dictyostellum.";

J. Biol. Chem. 268:23267-23274(1993).

T. FUNCTION: AFFECTS ACTIN POLYMERIZATION THROUGH INTERACTION WITH THE ACTIN-BINING PROTEIN CAP23/34. ACTS AS A CHABERONE BY STIMULATING THE REFOLDING OF DENATURATED CAP32 AND CAP34.

T. SUBGELIULAR LOCATION: Cytcolnasmic. Found in F-actin-rich regions of the cell cortex and cell protrusions.

C. DEVELOPMENTAL STAGE: Heat shock cognate proteins are expressed constitutively during normal development.

C. SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                           Gaps

PRESTIGENT IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
-!- FUNCTION: IN COOPERATION WITH OTHER CHAPERONES, HSP70S STABILIZE
-!- FUNCTION: IN COOPERATION WITH OTHER CYTOSOL AS WELL AS WITHIN ORGANELLES. THE HSP70S IN MITOCHONDRIA AND THE BROPLASHIC RETICULUM PLAY AN ADDITIONAL ROLE BY PROVIDING A DRIVING FORCE POR PROTEIN TRANSLOCATION. THEY ARE INVOLVED IN SIGNAL TRANSDUCTION PATHWAYS IN COOPERATION WITH HSP90. THEY PARTICIPATE IN ALL THESE PROCESSES THROUGH THEIR ABILITY TO RECORDIZE NONMATIVE CONFORMATIONS OF OTHER PROTEINS. THEY BIND EXTENDED PRETIDE SEGMENTS WITH A NET HYROPHOBIC CHARACTER EXPOSED BY POLYPEPTIDES DURING TRANSLATION AND MEMBRANE TRANSLOCATION, OR FOLLOWING

"An Alul polymorphism at the bovine 70 kD heat-shock protein-1
                                                                                                                                   ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   STRESS-INDUCED DAMAGE.
INDUCTION: By heat shock.
SIMILARITY: Belongs to the heat shock protein 70 family.
                                                                                                          91.3%; Score 42; DB 1; Length 640; 88.9%; Pred. No. 1.4;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      preexistent proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.

Biochim. Biophys. Acta 1219:64-72(1994).
Biochim. Biophys. Acta 1219:64-72(1994).
In cooperation with other chaperones, Hsp70s stabilize preexistent proteins against aggregation and mediate the folding of newly translated polypeptides in the cytosol as well as within of newly translated polypeptides in the cytosol as well as within organelles. These chaperones participate in all these processes through their ability to recognize nonnative conformations of other proteins. They bind extended peptide segments with a net hydrophobic character exposed by polypeptides during translation and membrane translocation, or following stress-induced damage.
-!- INDUCTION: By heat shock.
                                                                                                                                                                                                                                          Rattus norvegicus (Rat).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

dnaK-type molecular chaperone HSC70 - California sea hare (fragment)
NyAlternate names: heat shock protein 70 homolog HSC70
C;Species: Aplysia californica (California sea hare)
C;Species: Aplysia californica (California sea hare)
C;Date: 04-Sep-1998 #sequence\_revision 04-Sep-1998 #text\_change 13-Aug-1999
C;Accession: B44261
B;Kuhl, D:, Kennedy, TE.; Barzilai, A.; Kandel, B.R.
J. Cell Biol. 119, 1069-1076, 1992
A;Title: Long-term sensitization training in Aplysia leads to an increase in the express A;Accession: B44261; MUID:93077669; PMID:1360013

A;Accession: B44261
A;Status: preliminary; not compared with conceptual translation
A;Molecule type: nucleic acid
A;Residues: 1-208 <KUH>
A;Note: sequence extracted from NCBI backbone (NCBIP:118950)
C;Genetics:

A;Gene: HSC70 C;Function:

A,Description: involved in protein folding and assembling/disassembling of protein comp. C,Superfamily: heat shock protein 70 C,Keywords: ATP; molecular chaperone

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Description

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

Patent No. 6583275

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: Lynn A Doucette-Stamm and David Bush

TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO

ENTEROCOCCUS FAECIUM FOR DIAGNOSTICS AND THERAPEUTICS
                                           Sequence 5332, Application US/09134000C
Patent No. 6617156
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO
TITLE OF INVENTION: EXTEROCOCCUS FAECALIS FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/134,000C
FILE REPERENCE: 032796-032
CURRENT FILING DATE: 1998-08-13
PRIOR APPLICATION NUMBER: US 60/055,778
PRIOR APPLICATION NUMBER: US 60/055,778

for treatment of Identifying mutant peptides from heat-shock protein 70, cancer.

Claim 10; Page 6; 56pp; French.

This peptide corresponds to amino acid residues 286-294 of the human heat shock protein 70 (hsp70). The invention relates to a method of identifying peptides, derived from hsp70 that stimulate a tumour-specific one mutation or alteration of the hsp70 peptides that have at least a tumour-specific response. comprises: (i) amplifying hsp70 encoding DNA from one or more tumours; (ii) aloning the amplified encoding DNA from one or more tumours; (ii) aloning the amplified sequences into a vector that can be replicated in bacteria; (iii) sequencing fragments in each cultured bacterial colony to identify any hsp70 mutations, and (iv) determining the immunogenicity of the mutant peptides identified. The peptides, optionally formulated with an agent that induces cellular stress, are used for treatment of cancer,

```
The amino acid sequence of fragment 1 relating to position 286-294 of
thuman heat shock protein 70 (HSP70) is given. The new invention relates
thuman heat shock protein 70 (HSP70) is given. The new invention relates
to lymphocytes which recognise cells of a patient in which overexpression
of HSP has been induced. Overexpression of HSP leads to a substantial
increase in the numbers of HSPs and HSP pitopes presented on the
pericellular membranes by lymphocytes elicits a cytotoxic
response which kills the target cells. As a further embodiment of the
invention, HSP70 epitopes are mutated prior to being loaded into antigen
to presenting cells. This has the effect of increasing the immune response
to HSP and helps direct the immune response to specific cells, (e.g.
cancer cells). HSP70 fragments are useful for treating cancer or
intracellular infections by vaccination. The tolerance of the organism to
the tumour or to the virus associated HSP is broken using an immunogenic
mutated form of HSP and induction of a stress on the target tumoural or
intracellular infected cells
                                                                                                                                                                                                                                                                                    ..

particularly solid cancers (carcinoma, sarcoma, melanoma, neuroblastoma, cancers of head and neck, particularly kidney cancer). The peptides may also be used to increase the proportion of tumour-specific cytotoxic T lymphocytes in a cell culture and/or induce these cells to secrete cytotoxic factors (specifically interleukin-2, interferon-camma and tumour necrosis factor), particularly where the cells are used to stimulate immune defences. The method identifies peptides with high immunogenicity and high specificity for particular HLA (human leucocyte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          HSP, HSP70; heat shock protein 70; cancer; chronic infectious disease; vaccine; HSP-peptide complex; tumour; peptidic fragment; lymphocyte; cytotoxic response; epitope; antigen presenting cell; fragment 1.

The invention relates to a composition (I) comprising an immune effector cell and a cell penetrating peptide (CPP) associated with an antigen or antibody. Also included are (1) a vaccine comprising (I), CPP associated with an antigen, and a pharmaceutically acceptable carrier and (2) preparing a composition for a disease, by providing (I) and CPP associated with an antigen for disease, and introducing the antigens are, for example, tumour antigen enters into the cell. The antigens are, for example, tumour antigen exprise specialists of the antigen of the composition is useful for enhancing immunity in an animal to a disease, by administering a mature dendritic cell comprising CPP associated with an antigen to disease, to the animal comprision that following the administration, animal is protected from disease, where the animal comprises both CD4+ and CD8+ T cells. It is also useful for treating a lime.
                                                                                ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             disease (e.g. cancer, tumour, melanoma, thymoma, lymphoma, sarcoma, lung cancer, non-Hodgkin's lymphoma, leukaemia, Hodgkin's lymphoma, uterine cancer, cervical cancer, bladder cancer, kidney cancer, adenocarcinoma, breast cancer, prostate cancer, ovarian cancer and pancreatic cancer). The animal is further subjected to a cancer treatment including surgery, radiation, chemotherapy or gene therapy. The administration of (1), preferably dendritic cell is prior to, subsequent to or concurrent with,

```

This peptide corresponds to amino acid residues 286-295 of the human heat shock protein 70 (hsp70). The invention relates to a method of identifying peptides, derived from hsp70 that stimulate a tumour-specific T cell response. Identification of the hsp70 peptides that have at least one mutation or alteration compared with the native sequence, and induce a tumour-specific T-cell response, comprises: (i) amplifying hsp70 concorred into a vector that can be replicated in bacteria; (iii) coning the amplified sequences into a vector that can be replicated in bacteria; (iii) containing fragments in each cultured bacterial colony to identify any epytides identified. The peptides, optionally formulated with an agent that induces cellular stress, are used for treatment of cancer, cancers of head and neck, particularly kidney cancer). The peptides may cancers of head and neck, particularly kidney cancer). The peptides may lymphocytes in a cell culture and/or induce these cells to secrete cytotoxic factors (specifically interleutin-2, interferon-gamma and cytomour necrosis factor), particularly where the cells are used to immunogenicity and high specificity for particular HIA (human leucocyte

Sequence 10 AA;

The amino acid sequence of fragment 2 relating to position 286-295 of human heat shock protein 70 (HSP70) is given. The new invention relates to 1ymphocytes which recognise cells of a patient in which overexpression of HSP has been induced. Overexpression of HSP leads to a substantial increase in the numbers of HSPs and HSP pitopes presented on the pericellular membranes. Recognition of increased numbers of HSP epitopes on cell pericellular membranes by lymphocytes elicits a cytotoxic invention, HSPN epitopes are mutated prior to being loaded into antigen presenting cells. This has the effect of increasing the immune response to HSP and helps direct the immune response to specific cells, (e.g. cancer cells). HSPVO fragments are useful for treating cancer or intracellular infections by vaccinated HSP is broken using an immunogenic mutated form of HSP and induction of a stress on the target tumoural or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The amino acid sequence of fragment 3 relating to position 286-295 of human heat shock protein 70 (HSEP70) is given. The new invention relates human heat shock protein 70 (HSEP70) is given. The new invention relates to lymphocytes which recognise cells of a patient in which overexpression of HSP leads to a substantial increase in the numbers of HSPs and HSP leads to a substantial increase in the numbers of HSPs and HSP epitopes presented on the pericellular membrane. Recognition of increased numbers of HSP epitopes or call pericellular membranes by lymphocytes elicits a cytotoxic response which kills the target cells. As a further embodiment of the invention, HSP70 epitopes are mutated prior to being loaded into antigen presenting cells. This has the effect of increasing the immune response to HSP and helps direct the immune response to specific cells, (e.g. cancer cells). HSP70 fragments are useful for treating cancer or infractions by vaccination. The tolerance of the organism to the tumour or to the virus associated HSP is broken using an immunogenic mutated form of HSP and induction of a stress on the target tumoural or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            burnan heat-shock protein 70 (hsp70). The hsp70 peptide fragments of differentiation between diabetes types I and II. The peptides induce a shift of the T call response from Th (proinflammatory) to Th2 autoimmune diseases, especially type I diabetes but also systemic lupus erythematory). They can be used (a) for treatment or prevention of autoimmune diseases, especially type I diabetes but also systemic lupus erythematorsus, multiple sclerosis and rheumatoid arthritis; and (b) for diagnosing presence or onset of these diseases. Isolated T cells may be activated in vitro with (A), or with heat-shock protein 70 and the responding cells are selected, attenuated and then returned to the

The present invention relates to oligonucleotide clones originating in barley (Hordeum vulgare) which contain single nucleotide polymorphisms (SNP). The oligonucleotides may be used for analysis of SNPs among barley varieties, identification of particular varieties and genotype-phenotype analysis, isolation of specific genes and creation of new varieties by transformation of barley varieties with them and production of new barley varieties with desired properties. The present sequence represents an oligonucleotide clone sequence featured in the specification. The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at fite, wipo.int/pub/published-pct-sequences
                                                                                                                                                                                                                          Single nucleotide polymorphism sites in barley varieties and DNA sequences containing them for analysis and identification of barley varieties and production of barley transformants with desired

Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application,

Disclosure, Fig 3; 11pp; Japanese.

This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 1462-2-4. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Abnormal transcription of intracellular HSP70mRNA under acute and chronic continuous load of stress in a human being and its application.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophremia, depression and nephrotic syndrome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

the proliferation of cells. Modulation of the activity of the JNK phosphatase or Hsp72 is used to treat a proliferative disorder such as cancers (e.g., leukaemia, lymphoma, solid tumours such as sarcomas and carcinomas, breast cancer, prostate cancer). The compounds that inhibit Hsp72 activity can also be administered to treat premalignant conditions and to prevent progression to a neoplastic or malignant state. The compounds that inhibit Hsp72 function are administered to a patient having a disease or disorder mediated by an increase of Hsp72 expression or activity relative to normal levels. The present sequence represents human Hsp72 used in the exemplifications of the invention

                    This sequence represents the human heat shock protein SHSP70 amino acid sequence. Human heat shock proteins are located on chromosomes 6p21.3-22 and 14q22-24. The invention relates to the abnormal transcription of intracellular HSP70mRNA under acute and chronic stress load in a human. The abnormal transcription of HSP70 can be used in the improvement of stress and response and diagnosis of stress diseases including rheumatisms, schizophrenia, depression and nephrotic syndrome

According to the legend of Fig 2, the G. gallus HSP sequence has 635 amino acid residues, the sequence itself has only 634, including "O" (?) at position 634. Fig. 2 provides an alignment of heat shock proteins from a variety of organisms: 1. M. hyopneumoniae (Mnyhspy0 - AAR03922); 2. Bacillus megaterium (Bmehspy0 - AAR03923); 3. E. coli (dnaK - AAR03924); 4. T. cruzi (tc70kd - AAR03925); 5. T. cruzi (AAR03926); 6. Rat rattus (rathspy0 - AAR03925); 9. Gallus gallus (chkhspy0 - AAR03930); 10. Zea mays (mzehspy0 - AAR03931); 11. Serratia marcescens (smahsp70 - AAR03932); 7. AAR03932); 11. Serratia marcescens (smahsp70 - AAR03932); avecines and diagnosis involving e.g. Trypanosoma, Mycoplasma and

```

The invention relates to a novel method of identifying compounds that inhibit proliferation of cells comprising contacting a test compound with a cell which overexpresses Hsp72 (heat shock protein 72), and determining if the test compound inhibits activity or expression of Hsp72.

Optionally, Hsp72 is contacted with the test compound under optimum conditions to allow the two components to interact and bind, forming a conditions to allow the two components to interact and bind, forming a complex which is detected. The invention also relates to a method of identifying compounds that inhibit Hsp72-mediated JNK phosphatase activation, comprising contacting a test compound with a cell which determining if the compound inhibits JNK phosphatase activity. The invention additionally encompasses compositions compressing an inhibitor of Hsp72 or JNK phosphatase activity. The compounds identified as inhibitors of Hsp72 or JNK phosphatase activity are useful for inhibiting

Identifying compounds that inhibit proliferation of cells and capable of modulating the expression of heat shock protein 72 gene and/or activity of Hsp72 useful for treating cancers such as leukemia, lymphoma.

Example, Fig 16B, 77pp, English.
